

Static HTML Project

Steps to Create and Host a Simple HTML Project

1. Create Repository: Go to GitHub, click the "+" icon (top-right), select New repository, name it simple-html-app, and initialize with a README.
2. Create Index File: In the repository, click Add file > Create new file, name it index.html, and add the following code:

html

<!DOCTYPE html>

<html>

<head>

<title>My Simple App</title>

</head>

<body>

<h1>Hello World!</h1>

<p>This is a static HTML site hosted on GitHub Pages.</p>

</body>

</html>

3. Commit Changes: Click Commit changes to save the index.html file to the main branch.
4. Publish with GitHub Pages:
 1. Go to the Settings tab of your repository.
 2. Scroll down to the GitHub Pages section.
 3. Under "Source", select Deploy from a branch.
 4. Set the branch to main and folder to /(root), then click Save.

5. View Site: Wait a few minutes; the live URL (usually <https://yourusername.github.io/simple-html-app>) will appear in the Pages section.

Create a new repository

Repositories contain a project's files and version history. Have a project elsewhere? [Import a repository](#).

Required fields are marked with an asterisk ().*
